Personal Summary

Junior Flutter Developer with 1 year of hands-on experience in mobile application development. Specialized in building and maintaining cross-platform applications using Flutter and Clean Architecture. Experienced in developing and publishing mobile applications on app stores, delivering mobile solutions for clients in the UAE through freelance projects, as well as contributing to software development projects at Al-Ebdaa Software Company in Egypt.

Work EXPERIENCE

LogoMaker Mobile App | Video 📺 | Published on Google Play 📺

Freelance Project for a **UAE**-based client

- Built a high-performance Flutter-based LogoMaker application featuring an advanced custom canvas engine for real-time logo design and editing.
- Developed a **headless off-screen rendering engine** (OverlayEntry + RenderRepaintBoundary) enabling high-resolution exports up to **300 DPI / 4K** resolution in multiple formats including **PNG, JPG, PDF, and SVG** with precise pixel-level quality.
- Implemented a dynamic canvas interaction system with **drag, scale, rotate gestures**, snapping guides, and physics-based micro-animations for smooth UX.
- Engineered a scalable Clean Architecture system with BLoC state management, supporting **undo/redo** functionality and **structured layer-based editing**.
- Integrated **cloud asset synchronization pipeline (CDN)** with automatic upload, caching, and real-time asset replacement, along with **Stripe** Payment Gateway integration for handling in-app payments and monetization, including **Pro user accounts** with feature-based access control for paid users..

LogoMaker Admin Panel (Desktop App) | Video 📺

Developed an admin dashboard for managing templates and application content..

- Developed a core **graphics processing pipeline** including PNG decoding, layer compositing, custom HSV color picker, and dynamic text layout engine (TextPainter-based) ensuring accurate rendering and preventing text clipping across different canvas sizes.
- Engineered a scalable **Desktop Dashboard architecture** using Conditional Imports, Clean Architecture, BLoC/Cubit, Dependency Injection, and a full **Undo/Redo system** with immutable state tracking.
- Integrated a complete **Cloud + SaaS system** including **Cloudinary** CDN asset management and synchronization for application assets (logos, shapes, icons, and backgrounds), REST-based subscription & pricing management, and feature-based access control for paid (Pro) users.

Flutter Overlay App – Billiards Game Assistant| Video

Freelance Project | System-Level Overlay with Flutter

- Developed a floating overlay app using Flutter to assist billiards players by displaying real-time visual guides (ball reflections and angles) over the game screen.
- Used `flutter_overlay_window` and `dash_bubble` to create draggable, always-on-top UI elements.
- Designed and implemented a secure authentication and access control system that verifies users' subscription status before granting access to premium features.
- Integrated device identification by validating the user's device MAC address during authentication, ensuring that only the authorized purchaser can access their account and enhancing account security and privacy.

Tech: Flutter, Dart, `flutter_overlay_window`, `dash_bubble`, Android SDK

EDUCATION

Faculty of Computers And AI, Matrouh University, Egypt .

2021-2025

Graduation Project | [Codingo](#) | Video

Intelligent Tutoring Mobile App | Flutter Development

individual learning styles. The app begins by asking diagnostic questions to identify the learner's style (visual, auditory, kinesthetic, etc.), then uses a chatbot to collect prior knowledge and learning goals from the student.

Based on these inputs, the system generates a tailored learning path and presents educational content in a format suited to the learner's style. Implemented using Flutter with BLoC state management, clean architecture, and a responsive, user-friendly UI for effective learning engagement.

Key Technologies: Flutter, Dart, BLoC, Clean Architecture, Dio, Retrofit, `go_router`, `json_serializable`, `json_annotation`, `shared_preferences`, `flutter_screenutil`

Skills

- **Mobile Development:** Flutter | Dart
- **Architecture & State Management:** Clean Architecture | MVVM | BLoC State Management
- **Backend & API Integration:** RESTful API Integration | Firebase Authentication | Firestore Database | Supabase
- **Local Storage & Databases:** Sqflite | Hive | Shared Preferences
- **Notifications & Services:** Push Notifications | Local Notifications | Google Maps
- **DevOps & Deployment:** Fastlane (CI/CD) | Shorebird (OTA Updates)
- **UI & UX Engineering:** Responsive Design | App Localizations | Theming
- **Core Programming Skills:** Object-Oriented Programming (OOP) | Data Structures
- **Software Engineering Principles:** Design Patterns | SOLID Principles | Clean Code Problem solving
- **Additional Programming Languages** (*java, C++, Python*)
- **Version Control:** (Git, GitHub)
